Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4, 7-11 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Clark 2003/0096066 in view of Chu 6,676,097. The primary reference discloses the invention substantially as claimed, namely a bow comprising a knot portion 16, folds extending from the knot portion and an attachment structure which may include adhesive, braids and twist ties; see Figures 1,2 and 5, and paragraphs [0073], [0079] and [0081]. However, the primary reference does not disclose the use of a magnetic attachment means. The secondary reference discloses the use of adhesive or magnetic attachment means to adhere a bow to a metal substrate; see Figure 4 and column 2, lines 6-16 and 42-47. It would have been obvious to one of ordinary skill in the art to use the magnetic attachment means taught by the secondary reference in place of the attachment means in the article of the primary reference if the bow is to be attached to a metal surface. Concerning claims 7 and 14, the central part of the bow 510 in the primary reference may be considered a knot supporting member since no specific structural relationship between the knot supporting member and remainder of the bow has been set forth and no specific structural features of the supporting member have been set forth.

3. Claims 5, 6, 12 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Clark 2003/0096066 in view of Chu 6,676,097 as applied to claims 1-4, 7-11 and 14 above, and further in view of Curry. Curry discloses the use of twist ties and/or adhesive to adhere a bow to a package; see Figure 1 and column 3, lines 39-43. It would have been obvious to one of ordinary skill in the art to adhere a twist tie to the article of the prior art (Clark in view of Chu) in order to have two means of attaching the bow to the substrate in view of the teachings in Curry. The use of strings as opposed to twist ties is suggested by the fact that braids are a equivalent attachment means as set forth in paragraph [0081] of Clark.
